Energy poverty Projects in the Netherlands

René Schellekens RVO

30-3-20221

- Short introduction about the practice and why it has been successful?
- Have there been any challenges when implementing the practice - if yes, how have you overcome the challenges?
- What have been the impacts/results of the practice?
- How much administrative work has it required to plan and implement the practice?

RRE and RREW

1. Subsidy for municipalities
2. Small energy saving measures and activities
3. Aimed at mostly the energy poor

Measures and activities

- › Draught excluders
- › LED lights
- › Radiator heat reflector foil
- › Energy coaches

30-3-2022

Succes

- › Reached many households
- › A very simple arrangement
- › Most municipalities joined the subsidy scheme
- › Effect dependend on the methods in various municipalities
- › Evaluation is taking place now

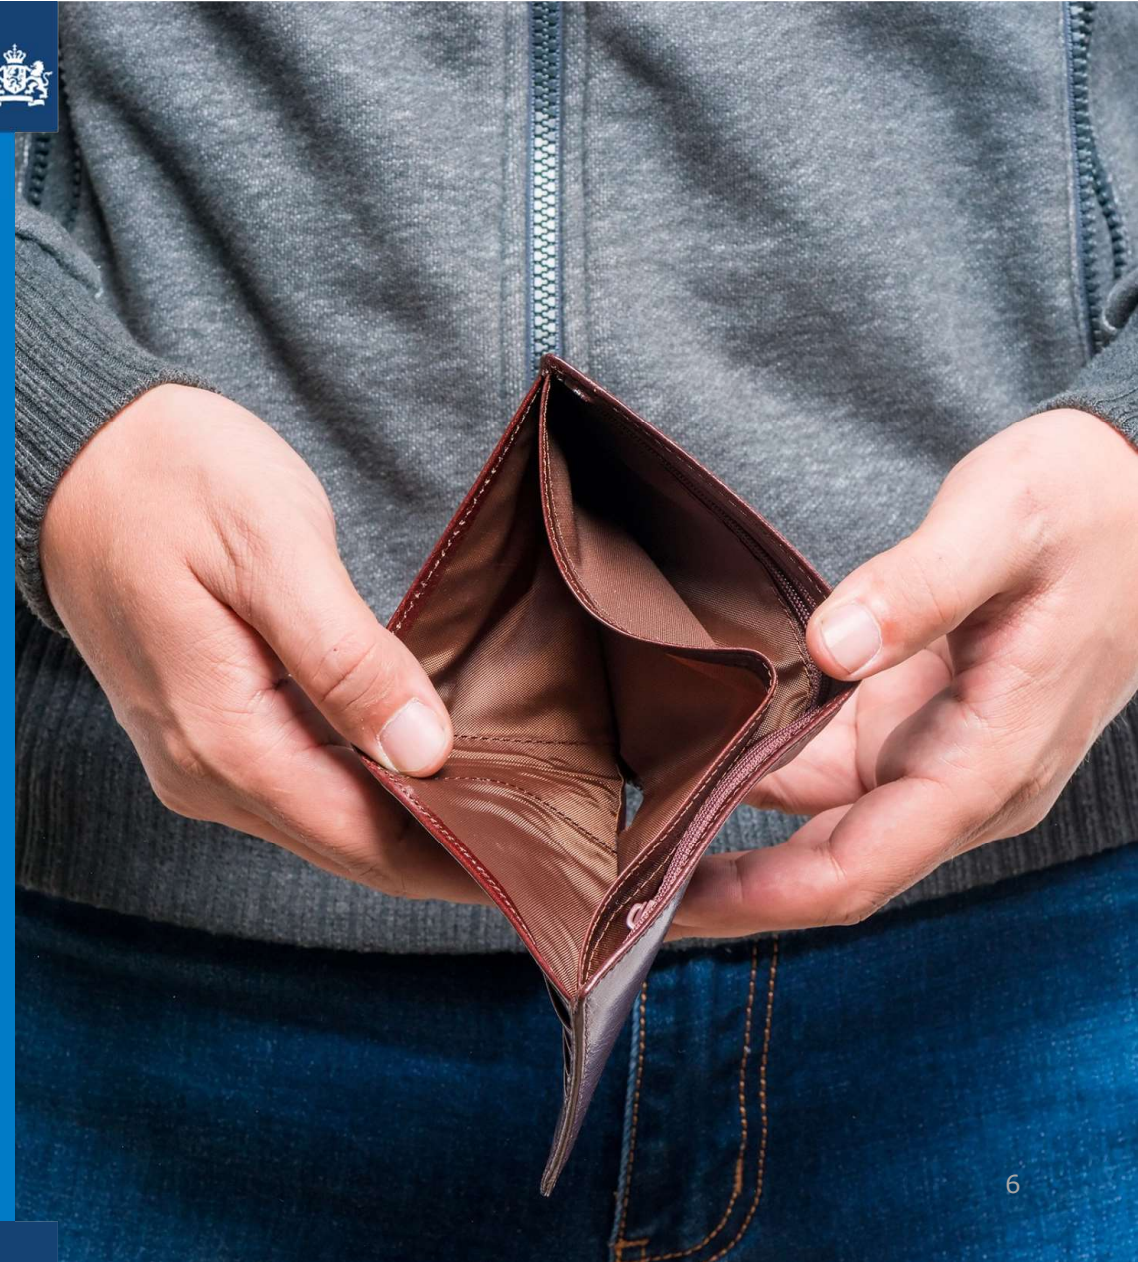

Challenges

- › Finding the energy poor
- › Focus on the energy poor

Solution

- › Involving the local social services departments
- › Choosing districts with a high percentage of energy poor

Work involved

- › Setting up the arrangement
- › A simple arrangement
- › Simplicity leads to loads of questions, too much room to move leads to uncertainty.

Project Drenthe Free Insulation

1. Municipalities
2. Aimed at the energy poor
3. Pilot
4. Monitoring effects and side effects

Challenges

- › Finding the energy poor
- › Getting the energy poor to join. It's too good to be true
- › Finding the right legal solution

Results

1. Very recent project
2. Interviews with energy poor households
